Home assignment

Implement 2 radio buttons before text “**Swagger → Quality Test Coverage**”

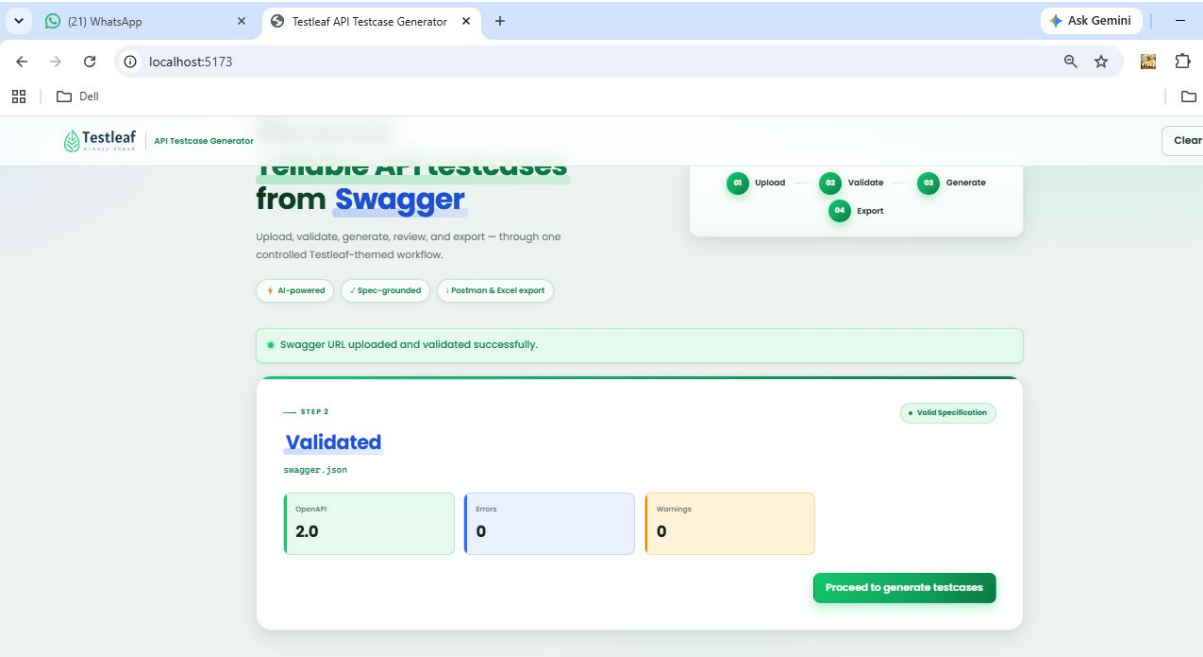

One radio button will have link to upload and 2nd for file upload option

[strict] only when link is selected , the text box for selecting file and uploading should be shown.If File upload option is selected , display the file upload [Upload Swagger specification] module form should be shown.When the link is selected , file name should be displayed in UI and should be uploaded , the user stories would be extracted and displayed in UI. The options to download the user stories in excel,JSON , swagger and postman should be available and user should be able to download.When the clear button is clicked, the form should cleared and again 2 radio buttons should be shown

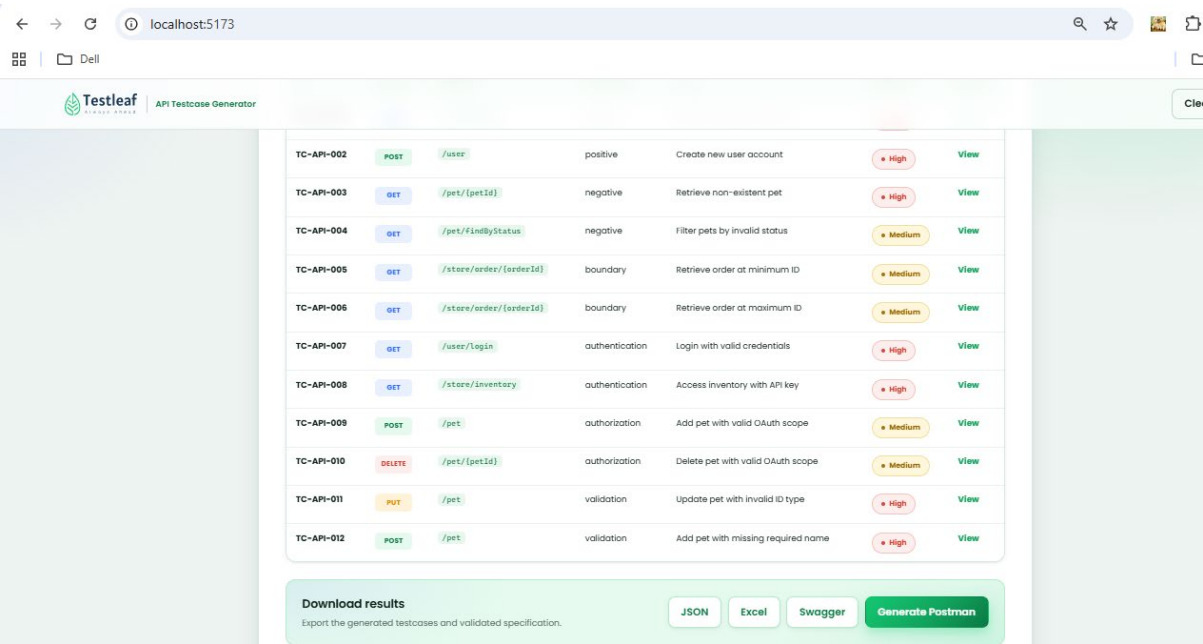

The screenshot shows a web browser at localhost:5173 displaying the Testleaf API Testcase Generator interface. The page has a light green header with the Testleaf logo and 'API Testcase Generator' text. A 'Clear' button is in the top right. Below the header, there are two radio buttons: 'Link upload' (selected) and 'File upload'. A section titled 'SWAGGER → QUALITY TEST COVERAGE' contains the heading 'Generate reliable API testcases from Swagger'. Below this, it says 'Upload, validate, generate, review, and export – through one controlled Testleaf-themed workflow.' There are three buttons: 'AI-powered', 'Spec-grounded', and 'Postman & Excel export'. To the right, a workflow diagram shows steps: 01 Upload, 02 Validate, 03 Generate, and 04 Export. The main content area is titled 'STEP 1 Upload Swagger specification' and includes the instruction 'Enter a public URL for an OpenAPI YAML, YML, or JSON document.' Below this is a 'Swagger URL' label and a text input field containing 'https://example.com/openapi.yaml'. A green button labeled 'Upload Swagger specification' is to the right of the input field.

Radio buttons shown

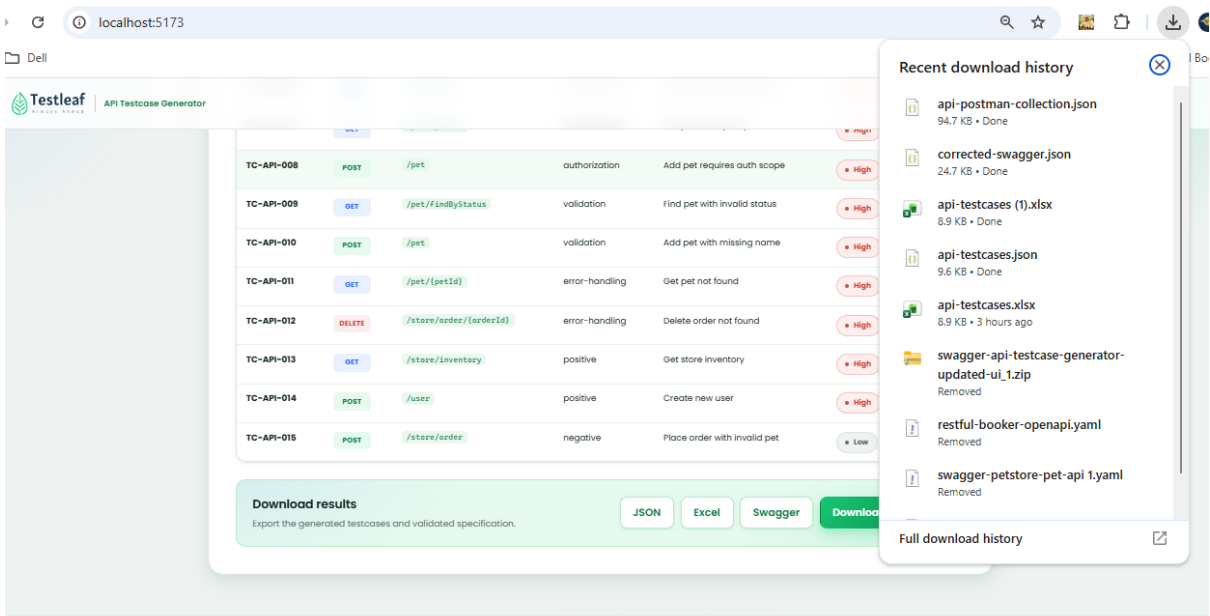

Link entered /pasted and click on upload

Generate userstories

Download all possible files from buttons shown.

Clear button clicked
