

Week2day1

Scenario1

Weak: "Test the search feature."

What's missing: No product type (e-commerce, hospital),

no filter/sort behavior, no empty/invalid input scenarios, no performance angle.

context : Generate Testcases for the search functionality in e-commerce website
Instructions: [Mandatory] Generate testcases for search scenario
[Critical] Generate positive and negative Testcases [Priority] Generate only 10 testcases [High Priority] Generate P1 and P2 testcases
Examples:
TC_ID|Description|Priority|Preconditions|Steps|Testdata|Expected Output|Attachments if any|Comments|raised by|Review score|Reviewed By
Persona: Act as a Senior Engineer to Generate/Design testcase Act as a Test lead to review the testcase
Output: Generate testcases in table and downloadable excel format
Tone: Professional and concise

Share

Below are 10 P1/P2 positive and negative test cases for the E-commerce Search functionality, designed and reviewed from a Senior QA/Test Lead perspective.

TC_ID	Description	Priority	Preconditions	Steps	Testdata
TC_001	Verify search returns relevant products for an exact product name	P1	Searchable product exists	Enter exact product name → Search	iPhone 15
TC_002	Verify search works with a partial product name	P1	Matching products exist	Enter partial product name → Search	iPhone

<https://chatgpt.com/c/6aa6b1a5-c8ac-83ee-8b3c-99dbae7c36b8>

7
Verify search handles special characters safely
P2
Search is available
Enter special characters → Search
@#%&*()
and displays appropriate result/validation state

8
Verify search ignores leading and trailing spaces
P2
Matching product exists
Enter term with spaces → Search
laptop
Results are equivalent to searching for laptop

9
Verify selected search result opens the correct product
P1
Search returns results
Search product → Open result
Samsung Galaxy S24
Correct product details page opens

10
Verify search handles very long input gracefully
P2
Search is available
Enter long string → Search
500+ character string
Application remains responsive and does not crash or timeout

Spreadsheet

Observations

1. The context was missing – for example ecommerce / manufacturing goods website etc
2. Number of textcases were not mentioned
3. priority was not mentioned
4. Device or web application was not mentioned
5. Apk version or release version not mentioned.

Scenario2

Test the cart functionality.

The screenshot displays the ChatGPT web interface. At the top, there are icons for copy, share, and other actions, along with a 'Free offer' badge. A user prompt in a blue bubble says 'Test the cart functionality.' The AI response states: 'I can test the cart functionality, but I'll need the application under test or its test evidence. Please upload a **screen recording/video of the cart flow** (or relevant screenshots) so I can execute a QA-style review covering **positive and negative scenarios, P1/P2 issues, expected vs. actual behavior, and defects.**' Below the response are more interaction icons. A disclaimer at the bottom reads 'ChatGPT can make mistakes. Check important info.'

The second part of the image shows a browser window with the URL 'https://chatgpt.com/c/6aa6b1a5-c8ac-83ee-8b3c-99dbae7c36b8'. The chat history on the left includes a prompt 'Generate testcases for E-commerce based application' and a response with instructions and examples. The main chat area shows a new prompt: 'Generate 10 P1/P2 positive and negative test cases for the E-commerce Add to Cart scenario, using the requested columns and professional QA format.' The AI response provides a link to download an Excel file: 'Download the Excel file: [E-commerce Add to Cart Test Cases](#)'. Below this, a file preview for 'Ecommerce_Add_to_Cart_Testcases.xlsx' is shown, labeled as a 'Spreadsheet'.

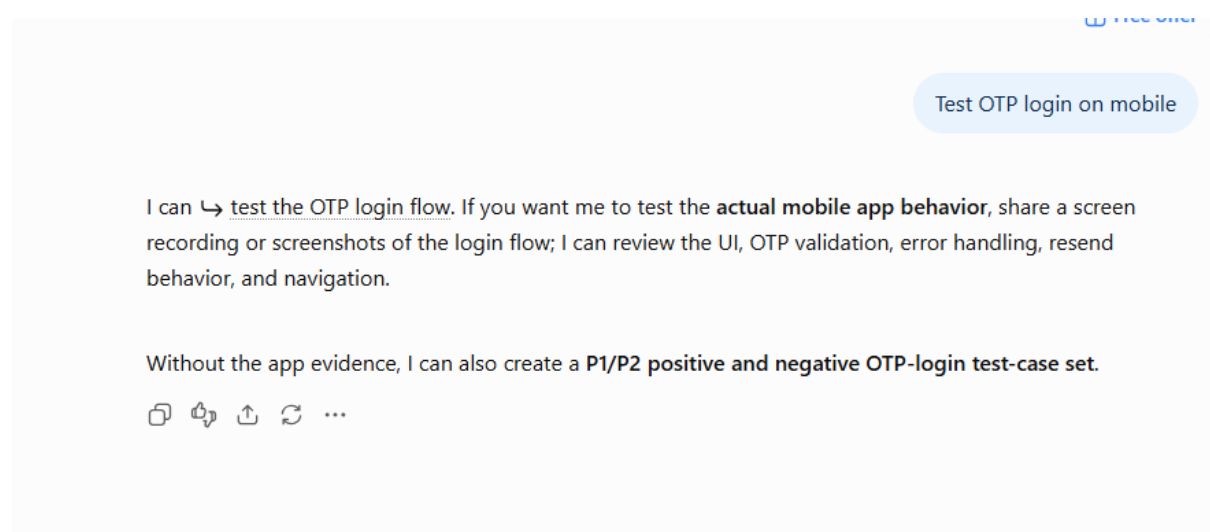

Observations

1. The context was missing – for example ecommerce / manufacturing goods website etc
2. Number of testcases were not mentioned
3. priority was not mentioned
4. Web application was not mentioned
5. Web browser was not mentioned

No add/remove/update actions, no price calculation validation, no coupon/discount scenarios, no out-of-stock handling.

Scenario 3

No add/remove/update actions, no price calculation validation, no coupon/discount scenarios, no out-of-stock handling.

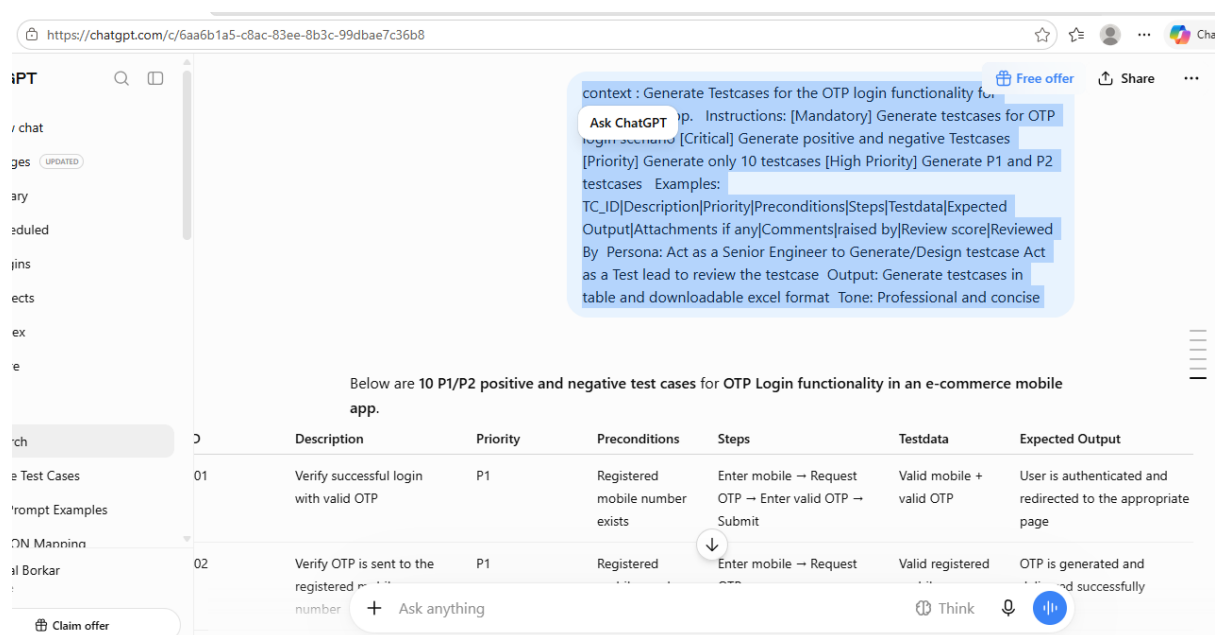

context : Generate Testcases for the OTP login functionality for ecommerce app.

Instructions: [Mandatory] Generate testcases for OTP login scenario [Critical] Generate positive and negative Testcases [Priority] Generate only 10 testcases [High Priority]

Generate P1 and P2 testcases Examples:

TC_ID|Description|Priority|Preconditions|Steps|Testdata|Expected Output|Attachments if any|Comments|raised by|Review score|Reviewed By Persona: Act as a Senior Engineer to Generate/Design testcase Act as a Test lead to review the testcase Output: Generate testcases in table and downloadable excel format Tone: Professional and concise
